

SAGAR JAYSWAL

AUTOMATION & CONTROLS TECHNICIAN

437-962-0400 | sagarjayswal63@gmail.com | [linkedin.com/in/sagar-jayswal](https://www.linkedin.com/in/sagar-jayswal) | Scarborough, Ontario | Portfolio

PROFESSIONAL SUMMARY

Automation and controls professional with 4+ years of experience programming, commissioning and troubleshooting PLC-controlled manufacturing systems. Hands-on with Omron, Siemens and Allen-Bradley platforms, HMIs, industrial robotics, machine vision, motion, pneumatics, hydraulics and industrial networks. Known for structured fault isolation, safe commissioning, clear documentation and production-focused improvements.

TECHNICAL SKILLS

PLC	Omron Sysmac Studio, CX-Programmer, Siemens TIA Portal / S7-1200, Allen-Bradley Studio 5000
HMI	Omron NB, Siemens HMI, FactoryTalk View, alarm diagnostics and parameter management
Automation	PLC programming, HMI development, commissioning, industrial networking, EtherNet/IP, root-cause analysis
Robotics & Vision	Wittmann robots, Keyence IV2/IV3, camera setup, result mapping, sensor integration and EOAT
Motion & Field	Servo drives, VFDs, pneumatics, hydraulics, I/O verification, sensors and actuators
Electrical	Control panels, schematics, instrumentation, multimeters, oscilloscopes and wiring verification
Standards	ISO 9001, ISO 14001, ISO 45001 and IATF 16949 manufacturing environments

PROFESSIONAL EXPERIENCE

Axiom Group Inc.

Sep 2025 — Present

Automation Technician

- Troubleshoot PLC-controlled injection-molding cells and downstream equipment across electrical, mechanical, pneumatic, hydraulic and controls systems.
- Modify Omron PLC logic, HMI parameters, machine sequences, vision settings and sensor configurations after systematic verification.
- Support Keyence IV2/IV3 vision systems, Wittmann robot position teaching, EOAT changes, label printers and industrial communications.
- Perform root-cause analysis, I/O checks and corrective actions to restore production and prevent recurring automation faults.
- Commission automation improvements and validate safety conditions, machine sequences and first-pass readiness through production trials.

Viraj Electromech

Nov 2020 — Aug 2023

Application Engineer

Sep 2022 — Aug 2023

- Developed and commissioned PLC software using Siemens S7-1200, Allen-Bradley Studio 5000 and Omron platforms.
- Designed HMI applications for diagnostics, alarms and machine operation, improving operator visibility during production and service.
- Integrated PLCs with robots, vision systems, servo drives, VFDs and industrial networks across complete automation projects.
- Executed startup, debugging, I/O verification, functional testing and customer acceptance for automated equipment.
- Prepared technical documentation and refined control sequences to improve maintainability and commissioning efficiency.

PROFESSIONAL EXPERIENCE — CONTINUED

Viraj Electromech	Nov 2020 — Aug 2023
Service Engineer	Aug 2021 — Aug 2022
• Troubleshoot PLC-controlled industrial machinery and electrical control panels, restoring equipment during breakdowns and service calls. • Used PLC diagnostics, electrical drawings, multimeters and oscilloscopes to isolate electrical, controls and communication faults. • Performed preventive and corrective maintenance and supported customers during urgent equipment failures. • Supported installation, commissioning and testing by verifying I/O signals, sensors, actuators, interlocks and machine sequences.	
Panel Assembler	Nov 2020 — Aug 2021
• Built and wired industrial control panels from electrical schematics, including PLC hardware, relays, terminals and power supplies. • Installed and labeled industrial control devices and completed point-to-point wiring verification. • Performed electrical checks and functional testing before panels were released for machine integration and commissioning.	

SELECTED TECHNICAL PROJECTS

Multi-Camera Vision Inspection Upgrade
Reviewed the existing PLC sequence, created and configured new inspection programs, updated camera-result mapping and validated pass/reject handling through end-to-end testing.
Machine vision · PLC ladder · Result mapping · Inspection logic
Automation Backup Manager
Built a desktop workflow for PLC, HMI, robot, fixture and vision backups with standardized naming, searchable history, monthly coverage and SHA-256 package verification.
Desktop application · Traceability · SHA-256 · Maintenance workflow

CORE WORKING PRACTICES

▪ Structured fault isolation from field device to PLC and machine response	▪ Safe sequence changes followed by functional verification
▪ Clear maintenance documentation and backup discipline	▪ Cross-functional support with engineering, production and maintenance

EDUCATION

Advanced Diploma, Electro-Mechanical Engineering Technology: Automation and Robotics	Jan 2024 — Apr 2025
Centennial College · Toronto, Ontario	
Bachelor of Electrical Engineering	Aug 2017 — Sep 2020
Gujarat Technological University · India	
Diploma in Electrical Engineering	Aug 2014 — Jun 2017
Gujarat Technological University · India
